

Leading High-Rise Firefighter Safety into the 21st Century

Numerous jurisdictions have made the installation of the rescue air system a part of their high-rise ordinances.

By having a Rescue Air System installed in high-rise buildings, you will ...

-Provide fire fighters with an endless, safe and reliable source of breathing air.

-Eliminate the need to have air cylinders shuttled between the staging floor and the air supply vehicle.

-Save lives and property by utilizing highly trained firefighters more effectively - doing what they are trained to do, fight fires and rescue people.
